

LaplaceMFS verification — single sphere to 512 spheres

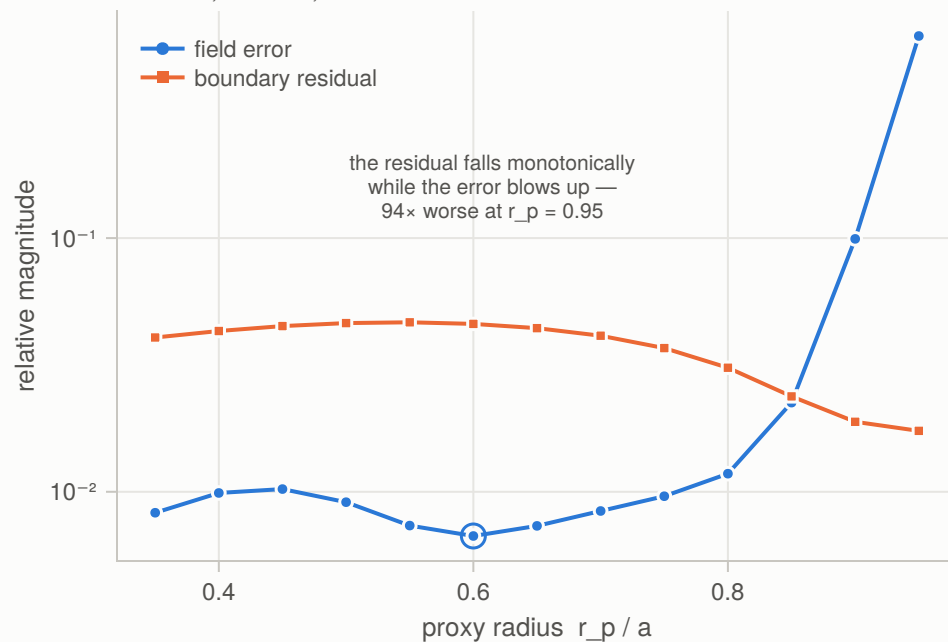

Accuracy is set by proxy degree

single sphere vs exact Legendre series, $r_p = 0.7$

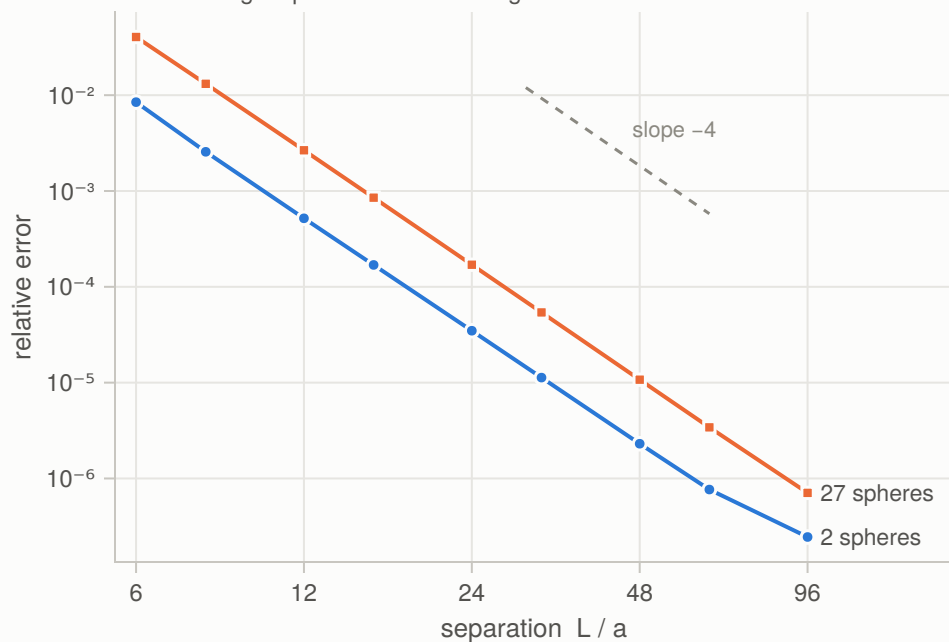

The residual is not the error

$d/a = 1.2$, $M = 723$, $N = 614$

Far-field decay follows $O(L^{-4})$

vs exact single-sphere answer as neighbours recede

GMRES iterations stay flat

cubic lattice, 1a surface gaps, $rtol = 1e-10$
